

The NHLBI is seeking a Director for its Division for the Application of Research Discoveries (DARD). DARD provides leadership for the vigorous pursuit of excellence in national and international research translation, dissemination, and utilization programs to speed the application of scientific advances in the prevention, detection, and treatment of cardiovascular, lung, and blood diseases and narrow the discovery-delivery gap. Through knowledge networks, education programs, community outreach, conferences, and symposia, DARD provides opportunities for multidirectional communication and collaboration among researchers, clinical and public health practitioners, patients, and the general public. DARD connects research and practice in a continuous learning loop; identifies knowledge gaps that should be addressed by future research; enables rapid translation of emergent knowledge by synthesizing and organizing evidence around priority diseases and conditions; facilitates knowledge-sharing and collaboration with key stakeholder groups; and reaches out to people in high risk, low-income, and minority communities to eliminate health disparities.
